Bed linen with TENCEL™-fibres

60 % TENCEL™ Lyocell, 40 % cotton

mercerized, white
TC 260, 150 g/m²

Virginia

plain satin

Lyocell – also known as **TENCEL™** – is a so-called "man-made cellulose fibre", i.e. a fibre industrially produced from natural raw materials. It is made from wood from forestry and is completely degradable in soil, compost and also in freshwater and seawater.

Botanical origin

TENCEL™ Lyocell and modal fibers come from the renewable raw material wood – from natural forests and sustainably managed plantations. The wood and the pulp used by the Lenzing Group come from certified and controlled sources.

Measurements and hand assessments show that TENCEL™ modal fibers are twice as soft as cotton. The softness of TENCEL™ modal fibers lasts longer and withstands repeated washing and drying compared to cotton.

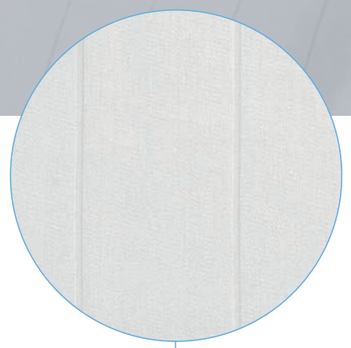

Sustainable production of TENCEL™ Lyocell fibers

TENCEL™ Lyocellfibers have made a name for themselves because of the environmentally conscious closed-loop manufacturing process that converts pulp into cellulose fibers with high resource efficiency and low environmental impact. This solvent spinning process recycles the process water and returns more than 99% of the solvent to the production cycle.

This product contains TENCEL™ Lyocell fibres.
TENCEL™ is a trademark of Lenzing AG.
