

A man and a woman are standing on a balcony of a cruise ship, looking out at the ocean. They are both wearing white bathrobes. The man is shirtless and has a white towel wrapped around his waist. The woman is holding a glass of champagne. They are standing in front of a large window with white curtains. The view outside shows a blue sea and distant mountains under a clear sky. The overall atmosphere is relaxed and luxurious.

We offer two distinct product lines:

Good Textiles

Ultimate sustainability in our premium collection.

Longlife Textiles

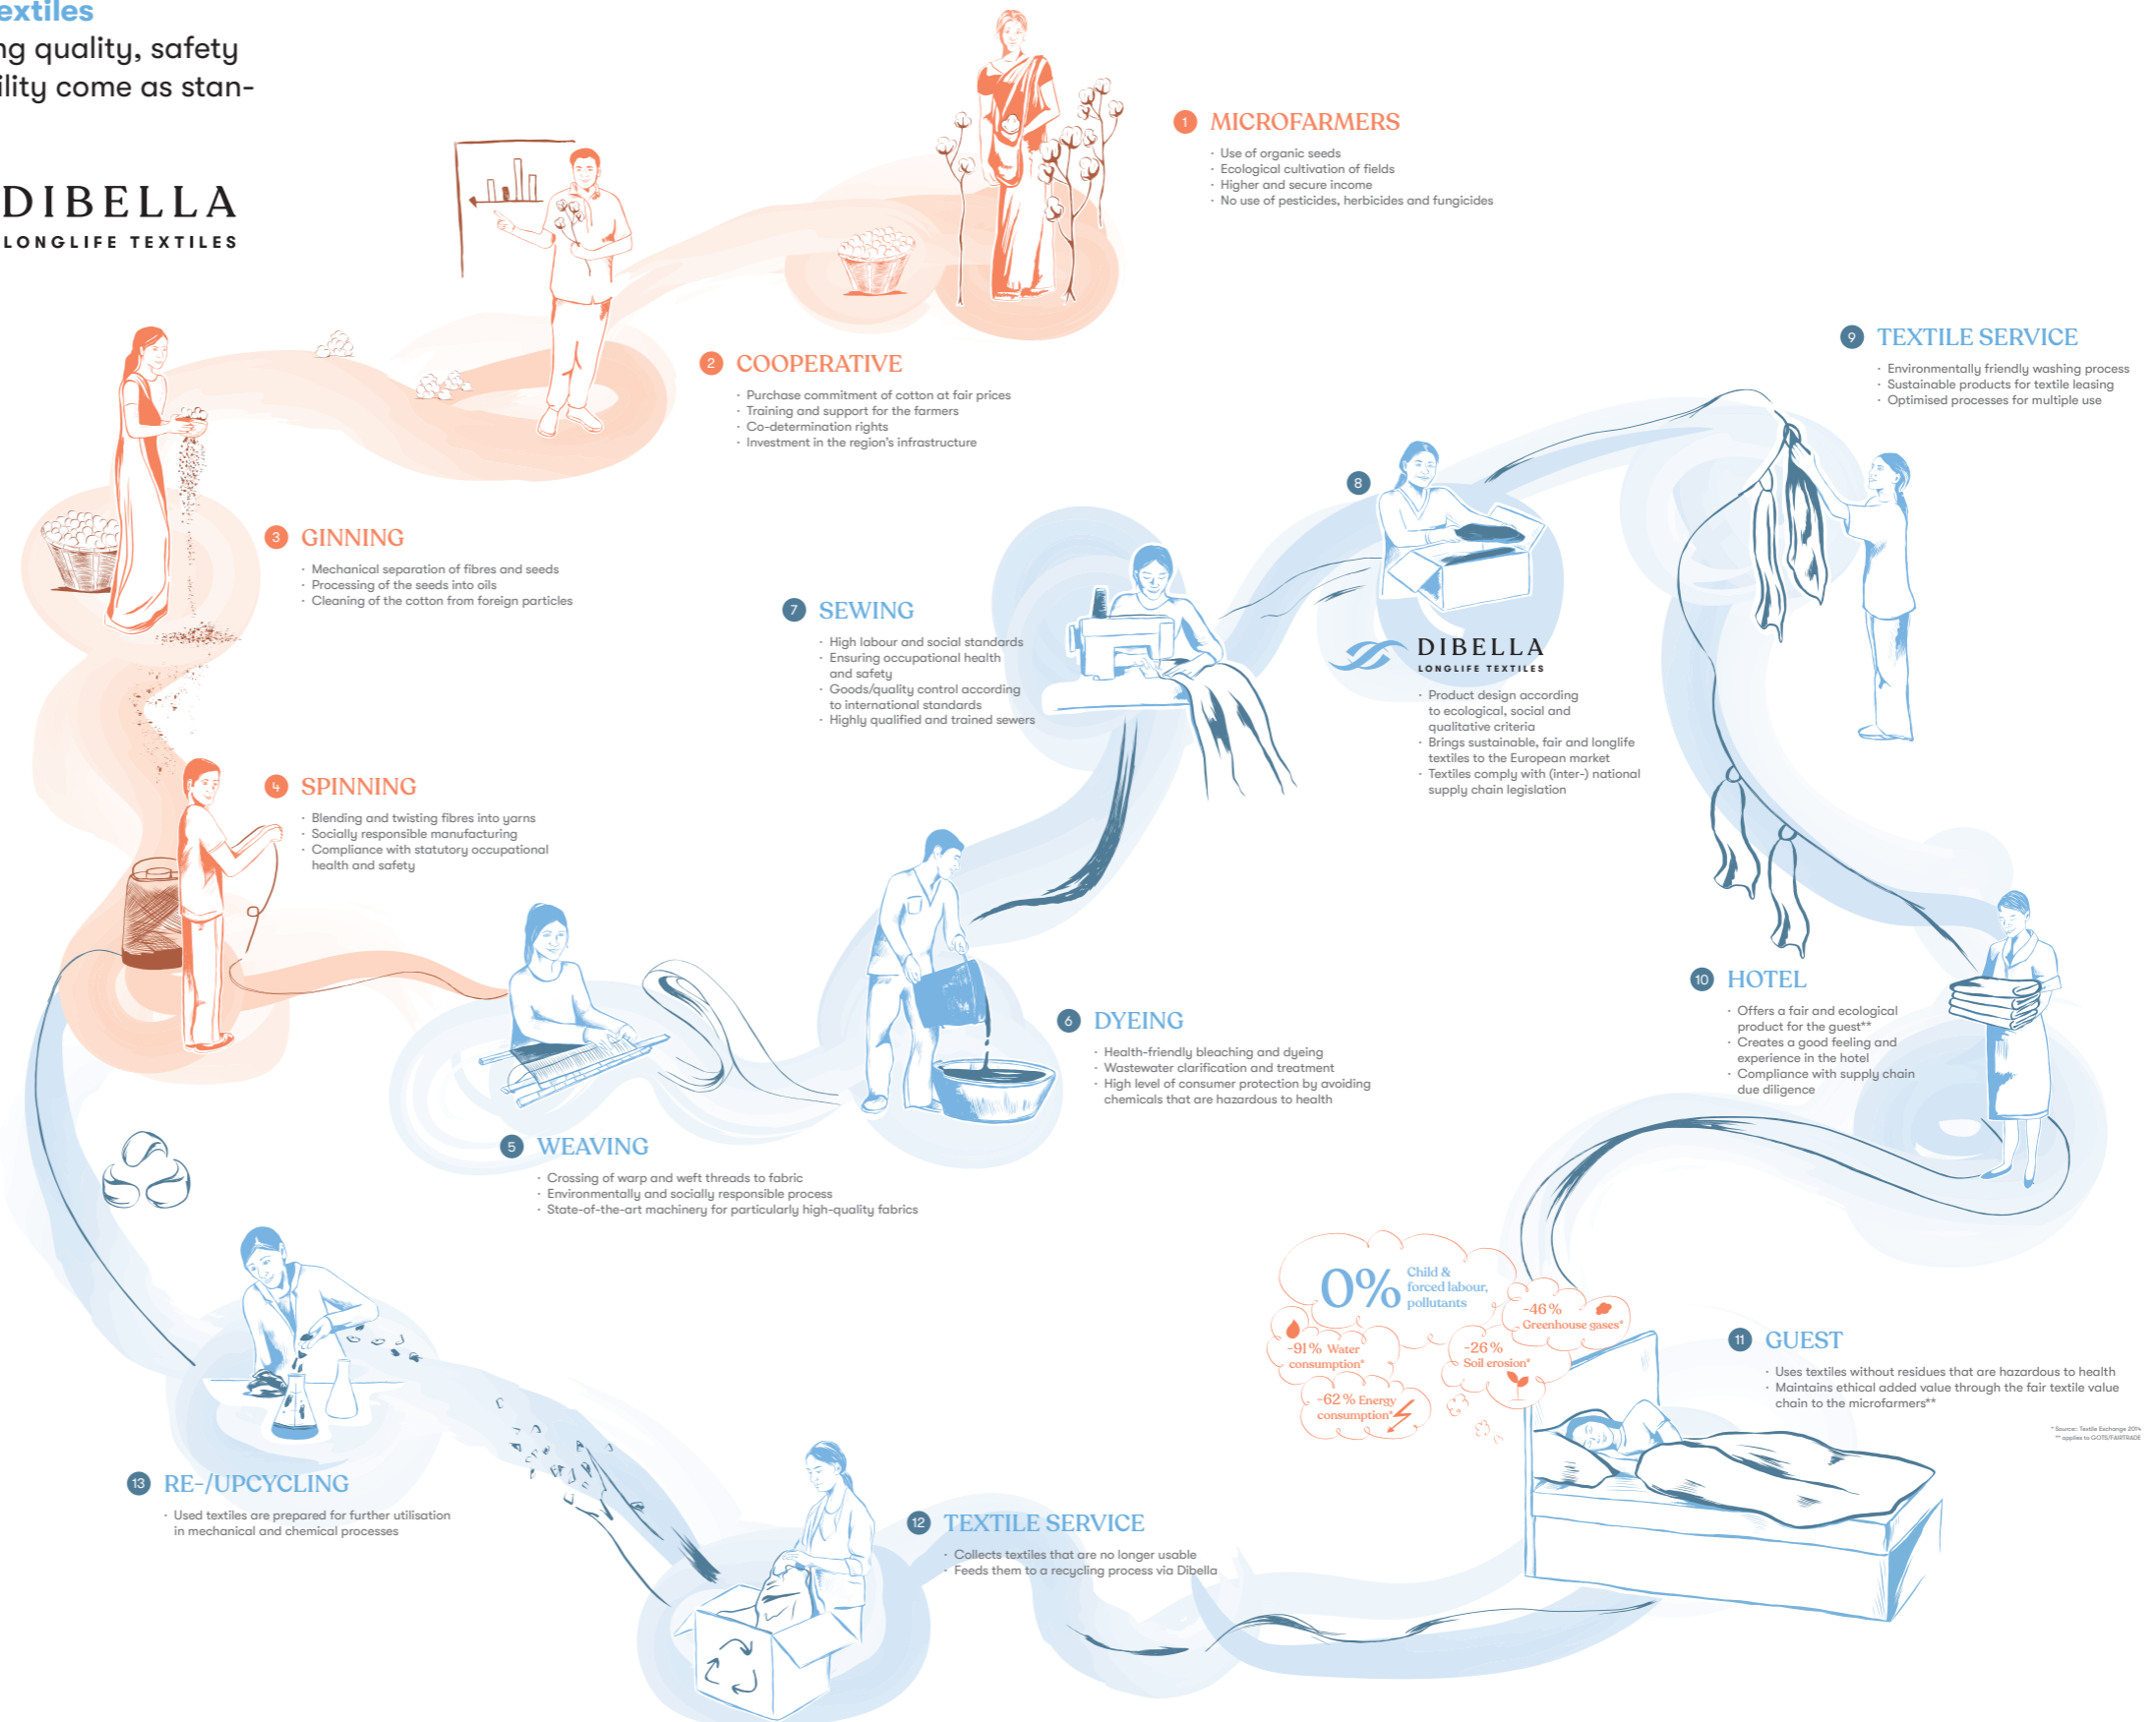

Outstanding quality, safety and durability come as standard.

For our organic Fairtrade goods (which covers the entire supply chain), we source the cotton from the Chetna co-operative in India. This sustainably and fairly grown cotton is processed locally in GOTS-Fairtrade certified companies – this results in the highest possible sustainability standard ever.

OEKO-TEX® MADE IN GREEN guarantees the best social and ecological standards from the weaving mill (shown in blue) and is the cornerstone of the Dibella assortment range. In addition, OEKO-TEX® MADE IN GREEN forms the basis for the GREEN BUTTON state seal.

Bed linen

- Zero Pre-wash** > No separate pre-wash necessary
- Easy Ironing** > Efficient ironing results
- Low Shrinkage Effect** > Reduced shrinkage

Bed linen with TENCEL™ Lyocell fibres

60% TENCEL™ Lyocell, 40% cotton

mercerised, white

TC 260, 150 g/m²

Virginia
plain satin

Lyocell – also known as **TENCEL™** – is a so-called "manmade cellulose fibre", i.e. a fibre industrially produced from natural raw materials. It is made from wood from forestry and is completely degradable in soil, compost and also in freshwater and seawater.

Botanical origin

TENCEL™ Lyocell and modal fibers come from the renewable raw material wood – from natural forests and sustainably managed plantations. The wood and the pulp used by the Lenzing Group come from certified and controlled sources.

Measurements and hand assessments show that TENCEL™ modal fibers are twice as soft as cotton. The softness of TENCEL™ modal fibers lasts longer and withstands repeated washing and drying compared to cotton.

Sustainable production of TENCEL™ Lyocell fibres

TENCEL™ Lyocell fibers have made a name for themselves because of the environmentally conscious closed-loop manufacturing process that converts pulp into cellulose fibers with high resource efficiency and low environmental impact. This solvent spinning process recycles the process water and returns more than 99% of the solvent to the production cycle.

*This product contains TENCEL™ Lyocell fibres.
TENCEL™ is a trademark of Lenzing AG.*
